

FOOD SERVICE CORE RANGE GUIDE

HAND HYGIENE | CLEANING | FOOD SERVICE | SAFETY WASTE MANAGEMENT | MATERIAL HANDLING

DELIVERING SAFETY IN FOOD SERVICE FACILITIES

Different areas of food service facilities face different challenges when it comes to cleaning, hand hygiene and waste management and the underlying importance of customer and staff safety.

Front or back of house, reacting to spillages, wiping down surfaces or managing waste, Food Service facilities and those that run them need the best results in the shortest timeframe. If products are deployed for on-the-go or heavy cleaning, reliability is crucial in controlling safety in these facilities.

In order to maximise time and cost efficiency, Food Service facilities need a focused range of product solutions from a trusted partner that tackle their cleaning, hygiene and waste challenges head on.

EFFICIENCY

The most efficient and cost-effective way to overcome multiple challenges is with a single solution.

CONTROL

The products that you and your team use correspond with how much control you have over potential risks.

TAILORED SOLUTIONS

RCP have created a core product range that addresses the challenges faced by facilities like yours.

Partnering with RCP gives you control with product solutions that:

- Deliver cleanliness, hygiene and safety for your facility
- Adapt to give consistent performance wherever they are used
- Are durably designed to deliver positive return on investment (ROI)
- Have easy operation that improves efficiency

BEST PRACTICE GUIDANCE HAND HYGIENE, CLEANING, WASTE MANAGEMENT AND SAFETY IN FOOD SERVICE FACILITIES

The essential guide for all food service facilities looking to implement cleaning, hygiene, safety and waste management best practices.

It is hard to imagine when hygiene matters more than when we eat. Prior to 2020, eating establishments were already subject to intense scrutiny. Customers returning with a heightened awareness for cleanliness and hygiene will expect facilities to be spotless.

TIPS 🖓

HAND HYGIENE – Frequent effective handwashing and the use of hand rubs helps prevent the spread of germs and infections.

CLEANING – Regularly cleaning surfaces and floors keeps them free of microbes and prevents the spread of germs.

WASTE MANAGEMENT – Isolating contaminated waste limits the cross-contamination potential. **SAFETY** – Keeping floors clean and free from obstructions prevents customer and staff trips and falls. Institutions such as the World Health Organisation (WHO) and the International Labour Organisation (ILO) provide guidelines to help facilities equip and prepare for a return to full operations. They cover four key areas:

HAND HYGIENE

Food service requires the close interaction between staff and customers. All facilities need to incorporate the latest guidance into their procedures:

- Update signage in bathrooms, kitchens, storage areas as well as front-of-house to build awareness of good handwashing practice.¹
- Stock bathrooms with paper towels which are preferred over hot air units for hand drying.²
- Provide hand santising stations in all staff and customer areas, not just in the bathrooms.²

CLEANING

While clean surfaces and floors are central to kitchen hygiene, this approach must now spread through every area alongside the most recent guidance:

- Review and enhance cleaning policies with a focus on common touchpoints (tables, doors, counters) and exchange points (money, menus, billing).²
- Prior to reopening, undertake a ventilation period, open windows and doors to aerate the location.²

WASTE MANAGEMENT

Good waste management has always been essential for minimising pest problems, but waste procedures will need to be updated to take in post-pandemic considerations:

- Remove open-lid refuse units from service and replace with closed-lid units.⁴
- Where waste collection accumulates back-of-house there should be provisions for cleaning bins between uses. 4
- Deploy multiple hand hygiene stations close-by for staff that handle waste.²

SAFETY

Although the focus of many food service facilities is the sharing of a meal, social distancing must continue to factor into all interactions.

- Where feasible, queuing on the street is preferred. Otherwise, use barriers to guide customers, enforce a one-way system or deploy screens to minimise face-to-face contact²
- Keep floors clean and clear of debris to minimise the risk of slips, trips and falls.
- Revise counter and kitchen arrangements to maximise side-to-side or back-to-back working.²

Clear communication of your procedures for hand hygiene, cleaning, safety and waste management to staff and customers drives adoption and supports lasting behavioural change and as a result, keeps everyone safe.

SERVING FOOD SERVICE FACILITIES

The environment within a food service facility is as important as the quality of the food and the standard of service. Clean, hygienic workplaces support the experience you want customers to have.

Wherever you stand in your kitchen you can see potential risk areas. Surfaces that must be hygienic, food that must be contained, bins that must be easily accessible and cleaning equipment that must solve challenges, not exacerbate them.

Hazards also approach a kitchen from the outside. Used crockery and cutlery, along with food waste, are coming from front-of-house environments and vermin are waiting in the street outside for scraps from poorly secured waste.

Overcoming these risks requires taking control of the factors that create them. The following pages highlight a core range of products that deliver control, supporting you and your facility's success.

WHY RUBBERMAID COMMERCIAL PRODUCTS?

Since 1968, RCP has partnered with businesses operating in different sectors, located in many countries around the world. We have over 50 years of experience delivering innovative solution-based products to a global audience.

Today, our continuing legacy is one of products that out last and outperform the competition, that save you money, protect your facility's users and reduce the unsustainable wasteful inefficiency that is created by cheaper, less durable alternatives.

Partner with RCP and you gain access to a range of product solutions that solve multiple problems across your facility. You can take control of operational challenges you face and do so in a way that is financially and ecologically responsible.

CORE RANGE PRODUCT CATEGORIES

Our core range is split into six distinct categories. Each contains products that have been developed with the challenges faced by Food Service facilities in mind.

As you continually try to improve how you meet challenges within your facility, you want to be able to find your way to a solution quickly. Our categorisations help you to do that. By focusing in on function, they provide a quick navigation route to an appropriate solution that works.

HAND HYGIENE

Food service facilities need visible cleaning and hand hygiene solutions that eliminate the risks for users and provide management staff with piece of mind.

CLEANING

Every facility faces a different set of cleaning challenges. Cost effective efficiency is possible with the use of cleaning products that deliver under all circumstances.

FOOD SERVICE

Kitchens and canteens must ensure safe preparation and delivery of food as well as thorough cleaning and maintenance of areas where food is consumed.

SAFETY

Within a food service facility, safety is paramount. Where hazards occur, or risk is increased, staff must use clear signage and durable barriers to warn and protect facility users.

WASTE MANAGEMENT

Facility management should deploy waste products, such as closed-lid bins, that keep users safe and provide enhanced control over disposal and recycling.

MATERIAL HANDLING

Transporting materials through food service facilities requires equipment that ensure staff and customer safety, while protecting contents from damage.

Products carrying this logo are part of our Workplace Essentials range. A set of solutions essential to every facility. They exemplify the very essence of the core range: durability, simplicity, usability and adaptability. No storeroom is properly stocked without Workplace Essentials on hand to meet the everyday challenges, and unexpected occurrences, that make up the management of a modern facility.

IDENTIFYING CHALLENGES DINING AREAS AND WASHROOMS

Front-of-house at any Food Service facility must blend pleasing aesthetics with practical hygiene concerns. High-traffic areas, that require responsive cleaning, and front-of-house environments should have preparedness incorporated into them without interrupting the dining experience. The below illustration explores some of the hotspots your facility might face and how to prepare for them discreetly and efficiently.

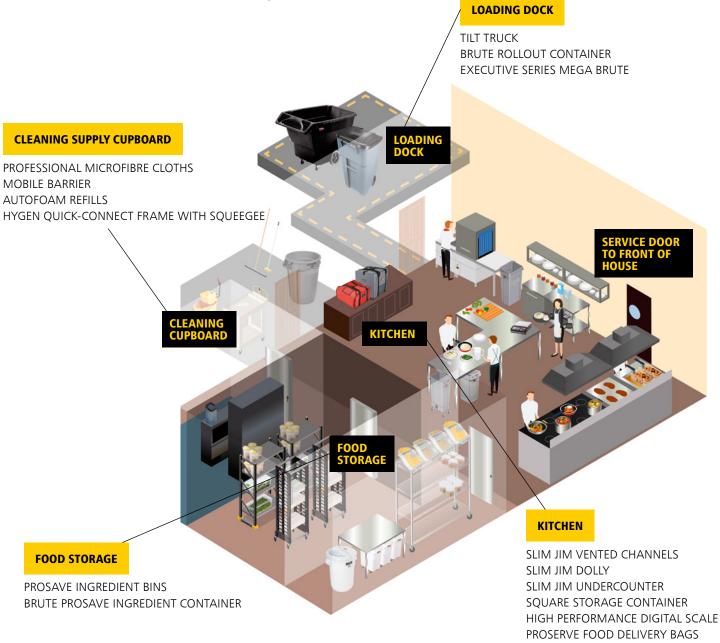

INSIGHT O

Diners will expect front of house areas to be spotless, but they don't want to see cleaning materials on show. Store materials within easy reach, but out of sight.

IDENTIFYING CHALLENGES KITCHENS AND STORAGE

In Food Service facilities, back-of-house generates two things: high-quality food and high volumes of waste. Used crockery, cutlery and food waste are coming in from front-of-house. Preparation and cooking areas create bin loads of waste as well as utensils that need cleaning. Waste must be processed and disposed of in a way that keeps kitchens clean and doesn't encourage vermin.

INSIGHT 📀

Where waste is stored, keep sensory triggers for vermin to a minimum. If they cannot smell or see accumulated waste, they will be less attracted to those areas.

The RCP Hand Hygiene System

A range of dispensers and refills that ensure clean hands. Dispensers can be securely wall mounted or free standing, making them suitable for all locations. Hygienic dispensing solutions and sealed refills of lotion and foam soaps and hand sanitisers mean wherever a dispenser is placed, there is an appropriate refill.

FLEXIBLE Wall-mounted and freestanding dispensers are an adaptable solution

Safe system of sealed refills prevents bacterial contamination of soap

DURABLE

Lifetime warranty gives you confidence in performance

Bulk refill soap dispensers are prone to bacterial contamination and in some cases can be transmission points for illness in a busy facility. These risks are mitigated with sealed soap systems that don't expose their contents to bacterial infection.

FLEX ALCOHOL-FREE HAND RUB

SKU: 3486613

An EnrichedFoam alcohol-free hand rub that is safe for everyone

- Ideal for maintaining a high level of hand hygiene in any facility
- Capacity options can deliver up to 2,500 doses per refill
- Sealed soap systems eliminate potential contamination points

RUBBERMAID FLEX DISPENSER

SKU: 3486591

Deliver hygiene into the hands of bathroom users with Flex dispensers:

✓ Variable dose sizes (0.4 − 1ml) adapt to the needs of children and adults

 Lifetime warranty means reassurance for you and your users

FLEX ENRICHEDFOAM ANTIBACTERIAL SOAP

SKU: 3486617

EnrichedFoam refills keep hands safe and doesn't aggravate the skin:

- Capacity options can deliver up to 3,250 doses per refill
- Easily installed in dispensers, increasing efficiency
- Box-free refills reduce the amount of waste a facility creates

INSIGHT 📀

Throughout your facility, in high-traffic areas or at welcome desks, where hand hygiene provisions are needed, but soap, water and paper towels cannot practically be deployed, use hand hygiene solutions that dry quickly to keep hands clean and germ free.

Slim Jim Range

The flow of waste through a food service facility must be robust to maintain safety. Slim Jim waste containers are practical to use and when combined with a dolly system can provide secure transportation throughout a facility.

Single-piece durable construction offers long-term solutions

SUSTAINABLE Split and maintain waste streams efficiently

RELIABLE Handles on the base and rim deliver handling control

SLIM JIM WITH VENTING CHANNELS

87 LTR SKU: 1955960 60 LTR SKU: FG354060GRAY

Slim Jim bins collect waste efficiently and dollies transport safely

Vented channels provide improved ergonomics

 Multiple size options create a flexible waste solution

Made of stainless steel, dollies will not chip or rust

Waste workflow runs through the bulk of a facility and needs to be contained to prevent contamination risks. As waste aggregates through the process, products that are designed to work together minimise the risk of spills and other contamination hazards.

SLIM JIM UNDER-COUNTER CONTAINER

SKU: 2026700

Efficient under the counter waste disposal solution:

- Angled opening allows double the access of traditional containers
- Ourable resin construction that allows for long term use
- Secure and easy-to-use liner cinches prevent accidents and spillages
- 47 LTR unit can fit on a dolly for ease of waste mobility

SLIM JIM RECYCLING STATION

See product listing pages for SKUs

A straightforward recycling solution to improve sustainability in your facility:

- Clear markings guide users to dispose of waste correctly
- Resin construction increases cleaning efficiency between uses
- Splitting waste ensures it can be kept separate, increasing recyclability

SLIM JIM STEP-ON. FRONT STEP

SKU: 1883552

Slim profile step-on container that is adaptable to the needs of its environment:

A closed lid container that safely isolates germs and odours

Foot operation eliminates contamination risks associated with hand use

Internal lid closure mechanism is quiet and prevents wall damage

INSIGHT

Studying disposable coffee cups, University of Alberta researchers found customers significantly more likely to recycle cups when their names were correctly spelt. A strong component in recycling uptake amongst facility users is connecting identity with responsibility.

Microfibre Cleaning

Constructed from a blend of nylon and polyester microfibres, the technology in these products is proven to remove 99.9% of microbes with or without the use of chlorine. No matter where or what you use them for, they provide unrivalled performance and cost in use.

DURABLE

Consistent performance across multiple tasks and cleaning processes

SUSTAINABLE

Reusable construction lasts longer reducing waste sent to a landfill

PROFESSIONAL **MICROFIBRE CLOTHS**

RED SKU: 1865827 GREEN SKU: 1865828 BLUE SKU: 1865829 YELLOW SKU: 1865830

Split blend microfibre with extended durability, these cloths keep your cleaning operations cost effective:

Remove 99% of microbes, whether used with chlorine or water

Variety of colours prevents the risk of cross contamination

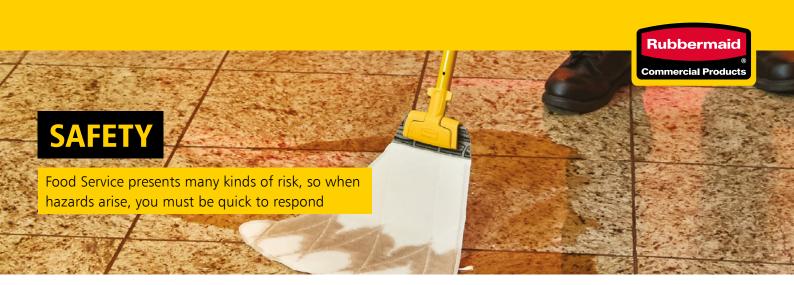

Robust stitching maintains shape throughout a lifetime of use

Endures 250 standard washes, 100 with chlorine

INSIGHT

Microbes on equipment and surfaces are the food stuff of germs and pathogens. Keeping surfaces as clean as possible requires the removal not just of hazardous organic material, but of the conditions that support their growth as well.

Spill Mop Kits

Whether they occur front or back-of house, spillages can be a serious hazard to staff and diners alike. Responding quickly and efficiently with an easy-to-deploy spill mop kit reduces risk and prevents surface damage from occurring.

DURABLE

Each mop pad can clear 940ml of water without leaking

RELIABLE Innovative design makes pads easy to attach, use and dispose of

CAPABLE

Spill mop pads leave floors dryer than string mop alternatives

SPILL MOP KIT

SKU: 2031093

A Spill Mop Kit carries everything you need for when spills occur

operational instructions

Holds two 10-piece general spills pads or two 10-piece biohazard spill pads

Telescopic mop handle housed alongside pads for quickest reaction times

The two factors in limiting risks from hazards that occur are to clearly alert people and resolve the hazard as guickly as possible. Lightweight deployable signage can ensure safe distances while staff use effective products to tackle the hazard efficiently.

A-FRAME SAFETY SIGN

SKU: FG611200YEL

A lightweight, quick-to-deploy caution sign for spills, trips or hazards:

Double sided, it warns users approaching from multiple directions

Seasy to carry, store and transport on cleaning carts

ANSI/OSHA colour compliant resin construction for long lasting safety

MOBILE BARRIER

SKU: FG9S1100YEL

Easy to deploy, store, move, see and use, the mobile barrier is ideal for every situation:

Situation appropriate deployment: straight, curved or circular

POP-UP CONE AND SLEEVE

SKU: FG9S000YEL

Multilingual, multi-directional signage for effective communication:

Durable resin construction endures the most rugged usage

Slimline storage appropriate for cleaning stores or facility walls

INSIGHT

When you have multiple areas within your facility that require different cleaning methodologies, you need to balance needs with budgetary constraint. The best route to cost effectiveness is to deploy products that perform in any environment.

Kitchen Core Range

The movement of food, whether decanting large volumes of ingredients into an under-the-counter storage unit or delivering cooked food off-site, can create risk for staff and customers. Durable products that minimise spillage risks and food spoilage provide safety for everyone.

CAPABLE Designed to meet the needs of food service facilities

Robust construction that matches quality with longevity

SUSTAINABLE

Long-lasting equipment reduces the scrap frequency of obsolete equipment

PROSAVE INGREDIENT BIN

79 LTR SKU: 2020793 116 LTR SKU: 2020951

A bulk food storage container that keeps food safely within reach.

Rectangular design that maximises the use of space

 Fixed and swivel wheels provide superior mobility across floor types

The slanted-front sliding lid allows easy access under counters

The shortest distance between food storage and preparation areas reduces waste and limits the areas where a spill can occur. While spills will happen, limiting the areas in which they can occur allows you to focus provisions on those areas.

PROSERVE PIZZA DELIVERY BAG

SKU: FG9F3700RED

Ensure food arrives at a customer's home looking like it just left the kitchen:

Nylon construction that endures years of constant use

Easy view labels keep orders and contents organised

Integral steam control system prevents food deteriorating

BUS BOX. LARGE SKU: FG335100GRAY

Efficient collection and transportation of used crockery and cutlery:

Curved edges and resin construction make cleaning easy

Durable design and structural strength protects contents and staff

✓ 29 LTR capacity improves efficiency with less trips

PROSERVE END LOAD CARRIER – LARGE

SKU: FG9F1300CGRAY

A lightweight and durable option to transport hot or cold food:

Insulated temperature control maintains food temperature

Large clear label window allows easy identification and monitoring

INSIGHT

Delivering food to someone's home is the last step in the process. Packing hot food often leads to condensation on containers, or worse, on food, negatively impacting important first impressions. Insulated carriers that dispel steam keep food looking kitchen fresh.

Safety is not just signs and barriers, it's cleaning too. The U.S. Department of Labour estimates that slips, trips and falls account for 25% of injury claims. Keeping floors clean, dry and free from debris minimises the occurrence of such injuries.

Safety measures need to communicate two things, the existence of a hazard and what is a safe distance from that hazard. To minimise risk, signs must be deployed quickly. Lightweight signage with clear messaging and rugged design keep people safe.

The RCP Core Range of products are designed to serve the needs of those that manage food service facilities. They take into consideration practical concerns such as cleanliness and safety while also delivering control over operational considerations such as productivity and budget.

The RCP Core Range is available globally, so wherever your facility is located, you can derive the benefits of a product range that has been designed with facilities like yours in mind. Partner with RCP and give your staff the very best waste management, safety, cleaning and hygiene experience available.
