8. Ventilation

DID YOU KNOW?

Disposable disinfectant wipes are very different from disposable microfiber. The material composition of disinfectant wipes varies greatly, which can lead to the spread of microorganisms from one surface to the other instead of its' removal. The efficacy of wipes is also limited by several factors: the wetness of the wipe, the storage time, the packaging, and the application time.

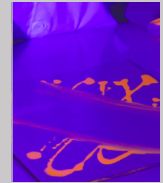

However, HYGEN™ disposable microfiber is purposefully engineered to incorporate all of the evidence-based features that deliver cleaning efficacy and efficiency.
