

MICROFIBRE SELECTION GUIDE

COMPREHENSIVE MICROFIBRE SOLUTIONS

Rubbermaid Commercial Products offers high-quality and high-efficacy microfibre products that provide effective cleaning performance in any facility.

MICROFIBRE EDUCATION

The science behind the power of microfibre and what sets Rubbermaid Commercial Products apart.

Pages 4-15

SURFACE CLEANING

A comprehensive selection of durable and disposable cloths for any type of facility need.

Pages 16-23

FLOOR CLEANING

A portfolio of mopping tools and accessories that drive productivity while helping to maintain a high level of clean.

Pages 24-43

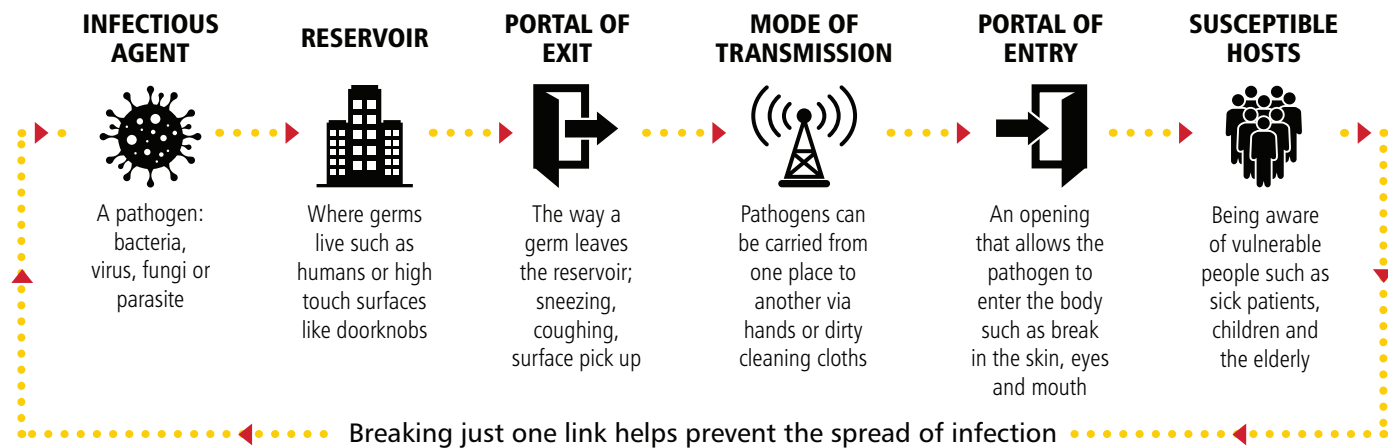

PRODUCT CARE

Laundrying instructions to ensure proper care of microfibre.

Pages 44-45

BREAKING THE CHAIN OF INFECTION

Understanding, and then breaking the chain of infection is critical to helping stop the spread of germs and bacteria.

THE AVERAGE DESK HAS
400x
MORE GERMS THAN A TOILET SEAT¹

AVERAGE LIFE EXPECTANCY IS
UP TO 48 HOURS
FOR RESPIRATORY VIRUSES ON SURFACES²

OVER 90% OF AIRBORNE MICROORGANISMS
IN BUILDINGS ARE DUE TO
RESUSPENSION FROM FLOORS & OTHER SURFACES³

¹The Independent, "Average desk contains 400x more germs than a toilet seat, new research reveals" | ²CollegeStats.org, "Bacteria on Campus" | ³ISSA/CIRI COVID-19 Symposium

HEALTH AND WELLNESS

Help improve cleaning efficacy by removing 99.7% or more of tested pathogens with water only¹.

PRODUCTIVITY

Combine multiple steps with cleaning tools that have been proven to decrease task time and reduce user effort.

SUSTAINABILITY

Have a positive impact on the environment by reducing water and chemical consumption by up to 95%.²

COST IN USE

High-quality microfibre construction is proven to last up to 500 commercial launderings, and up to 200 launderings with bleach.

IMAGE

The highest quality fibres ensure that surfaces dry quickly without streaks or smudges.

A LEGACY OF INNOVATION

We lead the industry in durability across the entire microfibre portfolio, delivering the highest cleaning efficacy and high cost-in-use value for any facilities' cleaning needs.

¹Based on third-party testing on VCT surface with water only | EPA Est. No 92100-CHN-1
²Environmental Protection Agency, Environmental Best Practices for Health Care Facilities, Using Microfibre Mops in Hospitals, November 2002, Page 1. Available at: www.epa.gov/region09/waste/p2/projects/hospital/mops.pdf

UNDERSTANDING MICROFIBRE

At its most basic, the term “microfibre” refers to a micro, or small, fibre made up of synthetic materials such as polyester, nylon, or a combination of the two fibres.

The individual microfibrils are knit together to form cleaning tools that are able to trap microscopic particles and liquids within the intricate network of small fibres far more efficiently than larger fibres.

[View our white paper, “Defining Microfibre: The HYGEN Difference”](#)

Unable to be seen by the eye, **one fibre measures less than one denier**, the measurement for the linear weight or mass density of fibres.

HOW IS MICROFIBRE MADE?

All microfibre begins with extrusion, which is the process of the shaping of a substance by forcing it through a mold.

HOW SMALL IS ONE STRAND OF MICROFIBRE?

Images below are magnified to demonstrate size comparisons.

HOW DOES MICROFIBRE WORK?

MICROSCOPIC FIBRES
Fibres trap microscopic particles, microbes, and liquids far more effectively than larger fibres by penetrating into the tiny grooves and crevices on a surface.

STATIC CHARGE
Most dust, dirt and bacteria have a negative charge and are naturally attracted to the positive static charge of the microfibre

VS.

COTTON FIBRES
Cotton fibres are too large to fit into the tiny grooves and crevices, pushing around particles but not picking them up.

WHAT'S THE DIFFERENCE

Synthetic polymers are what provide microfiber with some of its defining features, but how many times the fibre is split determines its cleaning performance.

COTTON

Cotton fibres are too large to clean in crevices where bacteria, spores, and viruses hide.

MONOFILAMENT MICROFIBRE

Monofilament fibres are about half the size of cotton and effectively clean in crevices where bacteria, spores, and viruses hide.

SPLIT-BLENDED MICROFIBRE

Split-blended microfiber has the smallest fibre size which further increases the surface area of the cloth for a superior clean.

CLEAN, THEN DISINFECT

The CDC specifically states that “cleaning is the necessary first step in any sterilisation or disinfection process”¹ given that disinfectants work most efficiently when they come into direct contact with the microorganisms they are trying to kill¹.

View our White Paper, “Two-Steps for a Reason: the Case for Cleaning Prior to Disinfection”

The physical action of scrubbing removes substantial numbers of microorganisms.¹

When microorganisms are trapped in dirt, that direct contact with disinfectants can't occur.^{1,2}

Microfibres have sharp edges that remove microbes from surfaces “like a carpenter’s plane, peeling off surface deposits.”³ that can be missed by disinfectants.

TYPES OF MICROFIBRE CLOTHS & PADS

Selecting the best microfibre product for a facility will depend on laundering capabilities, cleaning processes and the surfaces that need to be cleaned.

DURABLE MICROFIBRE

Use a launderable microfibre cloth for routine cleaning, colour-coded cleaning, and if commercial laundering is available.

DISPOSABLE MICROFIBRE

Single-use microfibre is best used in high-risk or high-touch areas, or if laundering is not available.

SPECIALTY MICROFIBRE

Specialty microfibre is designed for specific uses like glass and mirror cleaning, dry dusting, or heavy duty scrubbing for tile and grout.

⁵National Institute ofTechnology, P.O. Box 2608, St. Hanshaugen, N-0131 Oslo, Norway

⁶National Institute ofOccupational Health, LersH Parkalle 105, DK-2100 Copenhagen, Denmark Received 25 May 2001; received in revised form 18 August 2001; accepted 3 December 2001

⁷San Francisco Department of the Environment. Safer Practices and Products for Disinfecting and Sanitizing Surfaces. https://sfenvironment.org/sites/default/files/liers/files/sfe_th_safer_products_and_practices_for_disinfecting.pdf

One-step cleaner-disinfectants are tested with the U.S. EPA in the presence of only 5% organic matter on surface. However, if a surface exceeds that level, the product will no longer be effective.⁴

NOT ALL MICROFIBRE IS CREATED EQUAL

Studies published in peer-reviewed literature have demonstrated significant variability among different microfibre products in terms of absorbency, cleaning efficacy, and microbial removal.

GRAMS PER SQUARE METRE (GSM)

A measurement of the weight of a fabric. Higher GSM fabrics are typically thicker, more absorbent, and more durable than lower GSM fabrics.

KNITTING PATTERNS

Knitting patterns impact the overall look and feel of a product and can affect durability, performance, and intended use of the product.¹

LAUNDERING PERFORMANCE

Products that can withstand the CDC guidelines of using hot water and bleach are more effectively cleaned during laundering to help prevent cross-contamination and re-contamination of surfaces.

REMOVAL OF HARMFUL PATHOGENS

Third party testing from an accredited laboratory is a critical step to help ensure products have been confirmed to remove harmful pathogens.

QUAT BINDING

Quat binding occurs when the common class of disinfectant, quaternary ammonium compounds, binds to product fibres. Quat binding occurs with all split-blended microfibre due to the nylon content, but the binding is significantly less than traditional products made with cotton. Polyester fibres do not bind with quat.

COMPOSITION

SPLIT-BLENDED MICROFIBRE

The percentage of strands successfully split during the splitting process is critical to cleaning performance. Splitting creates 16 separate fibres which increases the surface area to optimise the capture of debris and microbes and absorption of liquids.

MONOFILAMENT MICROFIBRE

While no splitting occurs in monofilament microfibre, it still provides better cleaning performance than cotton. Monofilament microfibre made of 100% polyester is quat safe and often used in disposable products.

bleach

¹Smith DL, Gillanders S, Holah JT, Gush C. Assessing the efficacy of different microfibre cloths at removing surface micro-organisms associated with healthcare-associated infections. J Hosp Infect 2011; 78(3): 182-6.

HYGEN™ DURABLE MICROFIBRE

Premium, 16-split blended microfibre that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 20

HYGEN™ DISPOSABLE MICROFIBRE

Single-use microfibre that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 21

LIGHT COMMERCIAL MICROFIBRE

A versatile cleaning cloth for everyday use that has been proven to remove 99.7% or more of tested bacteria¹ with water only.

P. 22

SURFACE CARE

Viruses, such as influenza, can survive on surfaces and infect a person for up to 48 hours², making it important to clean high-touch surfaces such as doors, tables, light switches, and railings on a daily basis.

¹Based on third-party testing on VCT surface with water only | EPA Est. No 92100-CHN-1
Tested virus: Feline Calicivirus | Tested Bacteria: Clostridioides difficile (C. diff), Methicillin-resistant Staphylococcus aureus (MRSA), Pseudomonas aeruginosa

²CollegeStats.org, "Bacteria on Campus"

SURFACE CARE 101

The Association for Healthcare Environment (AHE) recommends the below best practices to help with optimal environmental cleaning and disinfection.

1 Clean from the cleanest surfaces in the room to the dirtiest

2 Clean from the top of the room to the bottom so that microbes and dirt fall to the ground

3 Wipe in one direction as it helps ensure solution is applied to the entire surface, and areas are not re-contaminated

4 Clean from the outside walls of the room to the centre of the room

MAXIMISE SURFACE CLEANING

The eight-sided fold methodology for microfiber cloths helps maximise surface cleaning, while minimising the risk of spreading dirt and debris across multiple surfaces.

BEGIN with open, clean Microfibre cloth

FOLD Microfibre cloth in half

FOLD Microfibre cloth in quarters

CLEAN surfaces with two exposed sides of cloth

OPEN Microfibre cloth once to change sides

REFOLD to expose two fresh cleaning sides

OPEN cloth fully once four sides have been used

REPEAT steps 2 through 7 to use all eight sides

COLOUR CODING

Colour is also a visually effective way to prevent cross-contamination.

The below colours are commonly used within different areas of a facility per industry guidelines.

- A** General Purpose
- B** Food Preparation Surfaces
- C** Infectious Substances
- D** Bathroom Surfaces

FLOOR CARE

Over 90% of airborne microorganisms in buildings are due to resuspension from floors and other surfaces¹ making floor cleaning important not only to remove dust, dirt, and debris, but to disinfect the surface where germs are commonly spread throughout a facility.

¹ISSA/CIRI COVID-19 Symposium

²Based on third-party testing on VCT surface with water only | EPA Est. No 92100-CHN-1

HYGEN™ AND LIGHT COMMERCIAL MICROFIBRE MOP PADS

Proven to remove 99.7% or more of tested pathogens² and are available in both durable and single-use pads for a variety of applications.

P. 28-31

HYGEN™ CHARGING BUCKETS

Designed for room-to-room cleaning, especially within Healthcare, and helps prevent the oversaturation of the mops.

P. 40-41

FLOOR CARE 101

When cleaning floor surfaces, the 'figure 8' motion is recommended to prevent cross-contamination and keep track of dirty and already cleaned surface.

FLOOR CARE PROCESS

Using the right process when cleaning floors helps prevent cross-contamination throughout a facility and protects floors from damage.

- 1 Check the floor for debris and use a scraper if needed before beginning.
- 2 Use microfibre dust pad and begin dust mopping from the entrance door working backwards. Dust mopping is important to maintain floor finish and shine.
- 3 Place wet floor sign on ground to alert patrons of wet floors, and to help prevent slips and falls.
- 4 Use microfibre mop pad with floor cleaning solution as recommended per chemical specified guidelines.
- 5 Begin mopping at the opposite end of the door or furthest point in room, and use a "Figure 8" motion.

COLOUR CODING

Using the same colour mop pads as cloths helps to create a consistent approach in avoiding cross contamination.

- A General Purpose
- B Food Preparation Areas
- C Infectious Substances
- D Bathrooms

ANATOMY OF A WET PAD

HYGEN™ Microfibre Wet Mop Pads are constructed of premium 16-split nylon/polyester blend microfibre that provides high-efficacy wet mopping performance.

FGQ41000BL00

FACE MATERIAL

- Split microfibre is tested to remove 99.7% of tested virus and bacteria with water only.*
- Optimised material construction helps clean effectively while allowing the mop pad to glide across floors.
- Bleach resistant to ensure mops can be effectively laundered to help reduce the risk of cross-contamination.

INNER LAYERS

- Absorbent inner layers help hold enough solution to clean up to 23 sq metres.

BACKING

- Industry-leading durable backing secures mop to frame to keep mop pad in place while mopping.
- Withstands chlorine bleach and extreme heat for superior durability ensuring pad securely attaches to frame throughout the product's life.

EDGE TAPE

- Durable edge helps retain mop shape with use over time.

ERGONOMIC DESIGN FOR WORKER COMFORT

SPRAY MOPS

Spray Mopping helps to cover more square metres in less time than traditional mopping systems.

Ergonomic trigger handle evenly dispenses three sprays of cleaner.

Unscrew the cap to manually refill or connect to the PULSE™ Caddy hose for automatic refills.

Holds up to 21 oz. of liquid solution, allowing users to clean up to 850 sq feet without needing a refill.

WHERE TO USE

ADAPTABLE MOP WITH MOP BUCKET	SPRAY MOPS	CHARGING BUCKETS FOR PADS
Heavy duty cleaning large areas Rinse/wring with mop bucket	Light duty cleaning smaller areas Touch-up/quick cleaning spill clean-up (no bucket required)	High-risk areas to reduce cross-contamination

HYGEN™ PULSE CADDY

Designed to fit in High Security Cart

Clean up to 929 sq. metres

HYGEN™ CHARGING BUCKET

The Charging Bucket charges the microfibre mop pads with cleaning chemicals and is designed to prevent oversaturation. It is compatible with HYGEN microfibre mop pads and the HYGEN Quick-Connect tools.

ADD water and/or cleaning solution to the Charging Bucket. The bucket design features an internal measuring guide to prevent oversaturation

PLACE damp mops in the Charging Bucket with the logo-imprinted side of the mops facing upward. Each bucket holds 20 damp mops

SECURE leak-proof lid to the Charging Bucket by snapping the end and side tabs into place

FLIP the Charging Bucket upside down and leave it upside-down for 5-10 minutes. The mops are now ready to use.

REDUCE CROSS-CONTAMINATION

- All-plastic sealable bucket holds 10–20 microfibre wet mop pads and 50 disposable pads
- Each mop holds enough liquid to clean up to 23 sq metres

SPECIALTY MOPS

HYGEN™ FLEXI-FRAME CLEANING

Flexible mop frame conforms to the shape of the surface being cleaned. Use hand-held or with HYGEN™ Quick-Connect handles and extension poles.

INNOVATIVE DESIGN

Patent-pending internal structure maintains consistent pressure on the surface being cleaned, even at the edges, and flexes back to original shape.

PRODUCT CARE

Please reference CDC guidelines for laundering and cleaning microfibre cloths and pads as it is essential to ensuring the life span and efficacy of the fibres.

GETTING STARTED:

-  **CLEAN** the laundry machines daily, before the first use.
-  **SEPARATE** Microfibre cloths and mops from other textiles.
-  **WASH** Microfibre cloths and mops in the Mesh Laundry Net to manage inventory.
-  **DETERMINE** detergent and maximum load size using chart below.*

DETERGENT AND LOAD SIZE BY MACHINE

WASHER SIZE	MAX VOLUME	DETERGENT LOAD**	45cm MOPS PER LOAD
27 kgs	271.8 L	44 mL	130
37 kgs	370.2 L	59 mL	175
46 kgs	459 L	74 mL	220
56.7 kgs	570 L	91 mL	270
64 kgs	642 L	103.5 mL	305
79.3 kgs	760.9 L	133 mL	375

LAUNDRY INSTRUCTIONS

COMMERCIAL WASHING: HOT WATER METHOD

- Wash in hot water (160°F/71°C) for 25 minutes¹
- Use Detergent and Load Size By Machine Guide to select appropriate capacity setting
- Use bleach if necessary

COMMERCIAL WASHING: COLD WATER METHOD

- Wash in cold water
- Use Detergent and Load Size By Machine Guide to select appropriate capacity setting
- Bleach is required at 50-150ppm²

COMMERCIAL DRYING

- Dry cloths and mops on low heat (130°F/54°C) setting
- Store dry cloths and mops in clean Rubbermaid Cube Truck

REQUIRED CARE

- Do not store cloths and mops in a washing machine overnight
- Do not use fabric softener in the wash cycle
- Do not use dryer sheets in the dry cycle
- Do not wash cloths and mops with other textiles

TRANSPORTATION

CONTAMINATED TEXTILES

- Don Personal Protective Equipment (PPE) before transferring soiled textiles into laundry machine
- Handle contaminated textiles carefully to avoid agitation
- Sort soiled microfibre from other textiles at the point of contamination using the Mesh Laundry Net
- Transport soiled textiles to the laundry with black Cube Truck with Cover

CLEAN TEXTILES

- Remove dry textiles from the dryer immediately
- Transport clean textiles in a properly cleaned blue Cube Truck with Cover or X-Cart with Cover
- Store clean textiles for only short periods of time. Wrap clean textiles for long-term storage
- Distribute textiles back into facility

OR

*Machine settings can be established by chemical provider.

**Represents 1/2 the average manufacturer's detergent recommendation. Using full amount of detergent can result in hazy floors.

Always follow the protocol as directed by your facility manager.

¹Per CDC Guidelines for healthcare facilities.

²Follow manufacturer instructions for bleach use.
